Re: EPA Ground Water Purge Water

Dear Mr. Kendrick,

The City of Grand Prairie, Texas is in receipt of the analytical results for the purge water from ground water samples associated with the Delfasco Forge site on November 19-20, 2008. We have reviewed the volatile organic compound results and have found them to be within our limits for total toxic organics to be discharged to the sanitary sewer.

Please be advised that the two (2) 55 gallon drums of purge water have been discharged to our sanitary sewer. Please let me know if you have any questions. I can be reached at (972) 237-8225.

Respectfully,

Cindy Mendez
Environmental Quality Manager
